

SPATIAL EFFECTIVE DOCUMENTATION

Drahomíra Zedníčková

GEODIS BRNO, spol. s r.o.

Abstract

This paper will present the different data sources and advanced technologies of data acquisition for interest area documentation for purposes of subsequent decision-making not only in the government offices but also in the commercial sphere. As a part of the presentation, the project OrtoČR 10 will also be introduced including final data samples and new possibilities of its practical applications, as well as 2 years experience with mobile mapping data acquisition. Equally interesting will be the examples of thermal imaging, captured by GEODIS thermal camera GbTherm.
